# LAPORAN ALGORITMA DAN PEMROGRAMAN TUGAS PEKAN 3

Oleh:

DIKA GIOWANDA NIM 2511533025

Dosen Pengampu:

DR. WAHYUDI, S.T, M.T

Asiaten Praktikum:

**JOVANTRI IMMANUEL GULO** 

FAKULTAS TEKNOLOGI INFORMASI
DEPARTEMEN INFORMATIKA
UNIVERSITAS ANDALAS
PADANG, SEPTEMBER 2025

### Instruksi:

1. Gubakan bangun ruang di bawah ini.

Volume Bola

Rumus:  $V = 4/3 \text{ Å} - \text{ Ï} \in \text{Å} - \text{ r} \hat{\text{A}}^3$ 

Input: jari-jari (r)

Output: Volume bola

Contoh Output:

Masukkan jari-jari bola: 7

Volume bola = 1436.2666666666667

- 2. Buatlah program Java menggunakan Scanner untuk menghitung volumenya.
- 3. Wajib menuliskan:
- Pseudocode program. Catatan: Pseudocode menjelaskan langkah-langkah logis program
- Flowchart program
- Kode program Java
- Output program (contoh uji coba)
- 4. Gunakan operator aritmatika (+, -, \*, /).
- 5. Tidak boleh menggunakan perulangan (for/while) atau percabangan (if/switch).
- 6. Nilai π gunakan 3.14.

## **KODE PROGRAM**

```
package TugasPekan3;
import java.util.Scanner;
public class VolumeBola {
  public static void main(String[] args) {
     // Nilai pi
     double pi = 3.14;
     // Membuat objek Scanner
     Scanner input = new Scanner(System.in);
     // Meminta input jari-jari
     System.out.print("Masukkan jari-jari bola: ");
     double r = input.nextDouble();
    // Menghitung volume bola: V = (4/3) * pi * r^3
     double volume = (4.0 / 3.0) * pi * r * r * r;
     // Menampilkan hasil
     System. out. println("Volume bola = " + volume);
     // Menutup Scanner
     input.close();
  }
}
```

## HASIL KODE PROGRAM

Masukkan jari-jari bola: 7 Volume bola = 1436.026666666666

## BAHASA PSEUDOCODE

## Judul

Program Volume Bola

{program menghitung volume bola berdasarkan jari-jari yang dimasukkan pengguna}

## Deklarasi

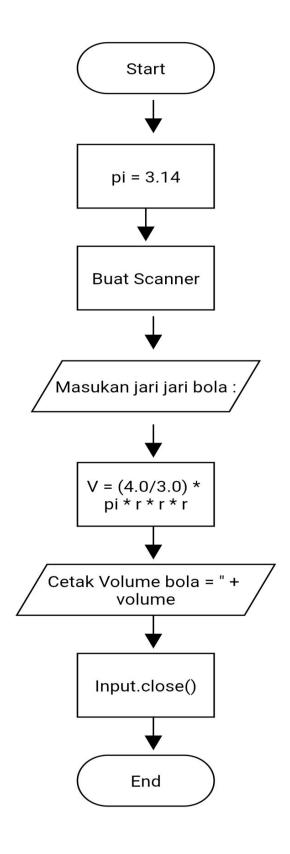

Var r : real;

Var pi : real;

Var volume: real;

### Pseudocode

- 1.  $pi \leftarrow 3.14$
- 2. Read(r)
- 3. volume  $\leftarrow (4.0 / 3.0) * pi * r * r * r$
- 4. Print("Volume bola = ", volume)

## **BAHASA NATURAL**

- 1. Program Start.
- 2. Masukan nilai pi 3.14.
- 3. Membuat objek Scanner untuk menerima input pengguna.
- 4. Masukan nilai jari jari bola (r)
- 5. Hitung volume bola menggunakan rumus:  $V = (4/3) * \pi * r^3$ 
  - 1. Kalikan 4.0 dengan pi
  - 2. Bagi hasilnya dengan 3.0
  - 3. Kalikan lagi dengan r \* r \* r
- 6. Tampilkan hasil perhitungan ke layer dalam format:
  - "Volume bola = [nilai hasil]"
- 7. Objek scanner ditutup untuk membersihkan sumber daya system.
- 8. Program berakhir.

Volume bola = 1436.0266666666666

```
1 package TugasPekan3;
         2
        3
                  import java.util.Scanner;
        5 public class VolumeBola {
        6⊖
                                  public static void main(String[] args) {
        7
                                                 // Nilai pi
                                                 double pi = 3.14;
        8
        9
     10
                                                  // Membuat objek Scanner
                                                 Scanner input = new Scanner(System.in);
      11
     12
     13
                                                  // Meminta input jari-jari
                                                 System.out.print("Masukkan jari-jari bola: ");
     14
     15
                                                 double r = input.nextDouble();
     16
     17
                                                  // Menghitung volume bola: V = (4/3) * pi * r^3
                                                 double volume = (4.0 / 3.0) * pi * r * r * r;
     18
     19
     20
                                                 // Menampilkan hasil
                                                 System.out.println("Volume bola = " + volume);
     21
     22
     23
                                                  // Menutup Scanner
     24
                                                 input.close();
     25
                                  }
     26
                  }
